

Photosynthesis Exit Ticket

Middle (Classes 6-8) · Science · CBSE · Photosynthesis: inputs and outputs

EXIT TICKET

1. Name the green pigment present in leaves that helps in photosynthesis.
2. Write the word equation for photosynthesis showing inputs and outputs.
3. Name the gas released during photosynthesis and the gas taken in by plants.
4. A plant is kept in a dark cupboard for three days. Will it be able to carry out photosynthesis? Give a reason.
5. Ramesh waters his plant daily but keeps it in a room with no windows. Explain why the plant may still not grow well.

ANSWER KEY

- 1) Chlorophyll
- 2) Carbon dioxide + Water (in presence of sunlight and chlorophyll) gives Glucose + Oxygen
- 3) Oxygen is released; carbon dioxide is taken in
- 4) No, the plant cannot carry out photosynthesis because photosynthesis requires sunlight, which is absent in a dark cupboard
- 5) Even with water, the plant needs sunlight to make its own food through photosynthesis; without sunlight in the room, it cannot prepare glucose and will not grow well
